

Odour Eliminator

IMMEDIATE EFFECT
BREAKS DOWN ODOURS
STAIN-FREE

This **Odour Eliminator** was not manufactured to cover up odours, but to eliminate them by breaking down odour molecules. The odour molecules are encased, isolating them, and then they are completely broken down. Thus, their spreading in the space is prevented. After the molecules are broken down, a pleasant, stable fragrance sets in, evoking the feeling of a clean environment with an excellent, long-lasting effect. This significantly differentiates it from other products that merely cover up odours.

The Odour Eliminator does not pollute the environment, it is biodegradable, and its use is completely safe for a wide range of surfaces. It does not contain parabens, phosphates, or silicone. It can be used to neutralise odours and to freshen any type of public space, in water parks, wellness and sports facilities, in entrance and production halls, hotels, restaurants, kitchens, toilets, smoking areas, dressing rooms, sanitary facilities, offices, in the food industry, in healthcare, animal hospitals, households, cars, public transport, and in other locations that require the maintenance of a clean and fresh environment.

It is ideal for eliminating odours in toilets, rubbish bins, wheelie bins, refrigerators, car interiors, carpets, upholstery, shoes, and clothing. It absorbs cigarette stench, animal odours, cooking smells, etc. The **Odour Eliminator** can also be used for suction lines in AC units and ventilation systems, in smelly drains (toilets, showers, kitchen sinks). It can be added to washing machines during the rinsing programme or to cleaning solutions for wiping smelly surfaces to increase the effects of fragrance during cleaning or mopping.

The neutraliser is in liquid form. It is fitted with a diffuser for easier dispersal.

APPLICATION with a diffuser: apply directly to the walls, furniture (even wooden), textile upholstery, carpets, floors, curtains, shoes, clothing, etc. The product completely evaporates and does not leave any remnants or stains after evaporating. It only leaves a pleasant fragrance in the space.

APPLICATION with a spray: manual applicators, low-pressure sprays
Not suitable for hot surfaces.

Packaging: 1 and 5 L
